Doctor's Specialty – Orthopedic
Medical Facility - Hyderabad
Date: 06-07-2023
Patient: Shah Rukh
DOB: 07-04-1989
Gender: Male

Referring Physician: Dr.Santosh
Subject: Doctor's Report – Right-Hand Bone Injury

Dear Santosh,
I am writing to provide a detailed report regarding the condition of my patient, Shah Rukh, who recently underwent a thorough examination for their right hand injury. After careful evaluation and diagnostic tests, it has been determined that surgery is required to address the bone injury in the patient's right hand. The following report outlines the findings and recommendations:

Clinical History: The patient has been recorded with Low blood pressure.

Clinical Examination: Right-hand injury with a swollen elbow.

Diagnostic Test: X-ray

Findings: Right-hand injury with a swollen elbow.

Diagnosis: Based on the clinical examination and diagnostic results, the patient has been diagnosed with a bone injury in their right hand.

Treatment Recommendation: To address the patient's condition effectively, it is recommended that surgery be performed to treat the right-hands bone injury.

Surgery will allow for precise realignment of the fractured bone and facilitate optimal healing.

Treatment Plan: The proposed treatment plan involves the following:

1. Surgical Procedure: A surgical intervention will be performed to repair and stabilize the fractured bone in the right hand. This will likely involve [briefly describe the surgical procedure or approach].
2. Anesthesia: The patient will be administered anesthesia during the surgery, ensuring their comfort and safety throughout the procedure.
3. Postoperative Care: Following the surgery, the patient will be provided with detailed postoperative instructions to facilitate proper healing. This may include immobilization, medication, and scheduled follow-up visits for monitoring and rehabilitation.

Prognosis: With timely surgical intervention and appropriate postoperative care, the prognosis for the patient's right hand bone injury is expected to be positive. And patient is monitored closely for 12hrs in Intensive care unit and later examined and reviewed for 3 days for further observation. It is anticipated that they will regain full functionality and resume their normal activities after a period of recovery and rehabilitation.

Please feel free to contact me if you require any additional information or have further questions regarding the patient's condition. I will be happy to assist you. Thank you for entrusting me with the care of your patient.

Sincerely,
Dr.Santosh
